Contents

Preface **xiii**

1 The Simplest Model of Financial Markets **1**
1.1 One-Period Finite State Model 1
1.2 Securities and Their Pay-Offs 3
1.3 Securities as Vectors 3
1.4 Operations on Securities 4
1.5 The Matrix as a Collection of Securities 6
1.6 Transposition 6
1.7 Matrix Multiplication and Portfolios 8
1.8 Systems of Equations and Hedging 10
1.9 Linear Independence and Redundant Securities 12
1.10 The Structure of the Marketed Subspace 14
1.11 The Identity Matrix and Arrow–Debreu Securities 16
1.12 Matrix Inverse 17
1.13 Inverse Matrix and Replicating Portfolios 17
1.14 Complete Market Hedging Formula 19
1.15 Summary 20
1.16 Notes 21
1.17 Exercises 21

2 Arbitrage and Pricing in the One-Period Model **25**
2.1 Hedging with Redundant Securities and Incomplete Market 25
2.2 Finding the Best Approximate Hedge 29
2.3 Minimizing the Expected Squared Replication Error 32
2.4 Numerical Stability of Least Squares 34
2.5 Asset Prices, Returns and Portfolio Units 37
2.6 Arbitrage 38
2.7 No-Arbitrage Pricing 40
2.8 State Prices and the Arbitrage Theorem 42
2.9 State Prices and Asset Returns 45
2.10 Risk-Neutral Probabilities 45
2.11 State Prices and No-Arbitrage Pricing 46
2.12 Summary 48
2.13 Notes 49
2.14 Appendix: Least Squares with QR Decomposition 49
2.15 Exercises 52

3 Risk and Return in the One-Period Model **55**
3.1 Utility Functions 55
3.2 Expected Utility Maximization 59
3.3 Reporting Expected Utility in Terms of Money 60
3.4 Scale-Free Formulation of the Optimal Investment Problem with the HARA Utility 62
3.5 Quadratic Utility 66
3.6 Reporting Investment Potential in Terms of Sharpe Ratios 70
3.7 The Importance of Arbitrage Adjustment 77
3.8 Portfolio Choice with Near-Arbitrage Opportunities 78
3.9 Generalization of the Sharpe Ratio 82
3.10 Summary 83
3.11 Notes 84
3.12 Exercises 85

4 Numerical Techniques for Optimal Portfolio Selection in Incomplete Markets **87**
4.1 Sensitivity Analysis of Portfolio Decisions with the CRRA Utility 87
4.2 Newton's Algorithm for Optimal Investment with CRRA Utility 91
4.3 Optimal CRRA Investment Using Empirical Return Distribution 93
4.4 HARA Portfolio Optimizer 99
4.5 HARA Portfolio Optimization with Several Risky Assets 100
4.6 Quadratic Utility Maximization with Multiple Assets 104
4.7 Summary 106
4.8 Notes 107
4.9 Exercises 107

5 Pricing in Dynamically Complete Markets **109**
5.1 Options and Portfolio Insurance 109
5.2 Option Pricing 110
5.3 Dynamic Replicating Trading Strategy 113
5.4 Risk-Neutral Probabilities in a Multi-Period Model 121
5.5 The Law of Iterated Expectations 124
5.6 Summary 126
5.7 Notes 126
5.8 Exercises 126

6 Towards Continuous Time **131**
6.1 IID Returns, and the Term Structure of Volatility 131
6.2 Towards Brownian Motion 133
6.3 Towards a Poisson Jump Process 142
6.4 Central Limit Theorem and Infinitely Divisible Distributions 148
6.5 Summary 149
6.6 Notes 151
6.7 Exercises 151

7 Fast Fourier Transform **153**
7.1 Introduction to Complex Numbers and the Fourier Transform 153
7.2 Discrete Fourier Transform (DFT) 158
7.3 Fourier Transforms in Finance 159
7.4 Fast Pricing via the Fast Fourier Transform (FFT) 164
7.5 Further Applications of FFTs in Finance 167
7.6 Notes 171
7.7 Appendix 172
7.8 Exercises 174

8 Information Management **175**
8.1 Information: Too Much of a Good Thing? 175
8.2 Model-Independent Properties of Conditional Expectation 179
8.3 Summary 183
8.4 Notes 184
8.5 Appendix: Probability Space 184
8.6 Exercises 188

9 Martingales and Change of Measure in Finance **193**
9.1 Discounted Asset Prices Are Martingales 193
9.2 Dynamic Arbitrage Theorem 198
9.3 Change of Measure 199
9.4 Dynamic Optimal Portfolio Selection in a Complete Market 204
9.5 Summary 212
9.6 Notes 214
9.7 Exercises 214

10 Brownian Motion and Itô Formulae **219**
10.1 Continuous-Time Brownian Motion 219
10.2 Stochastic Integration and Itô Processes 224
10.3 Important Itô Processes 226
10.4 Function of a Stochastic Process: the Itô Formula 228
10.5 Applications of the Itô Formula 229
10.6 Multivariate Itô Formula 231
10.7 Itô Processes as Martingales 234
10.8 Appendix: Proof of the Itô Formula 235
10.9 Summary 235
10.10 Notes 236
10.11 Exercises 237

11 Continuous-Time Finance **239**
11.1 Summary of Useful Results 239
11.2 Risk-Neutral Pricing 240
11.3 The Girsanov Theorem 243
11.4 Risk-Neutral Pricing and Absence of Arbitrage 247
11.5 Automatic Generation of PDEs and the Feynman–Kac Formula 252
11.6 Overview of Numerical Methods 256
11.7 Summary 257
11.8 Notes 258
11.9 Appendix: Decomposition of Asset Returns into Uncorrelated Components 258
11.10 Exercises 261

12 Dynamic Option Hedging and Pricing in Incomplete Markets **267**
12.1 The Risk in Option Hedging Strategies 267
12.2 Incomplete Market Option Price Bounds 283
12.3 Towards Continuous Time 291
12.4 Derivation of Optimal Hedging Strategy 297
12.5 Summary 306
12.6 Notes 307
12.7 Appendix: Expected Squared Hedging Error in the Black–Scholes Model 307
12.8 Exercises 309

Appendix A Calculus **313**
A.1 Notation 313

A.2 Differentiation 316
A.3 Real Function of Several Real Variables 319
A.4 Power Series Approximations 321
A.5 Optimization 324
A.6 Integration 326
A.7 Exercises 332

Appendix B Probability **337**
B.1 Probability Space 337
B.2 Conditional Probability 337
B.3 Marginal and Joint Distribution 340
B.4 Stochastic Independence 341
B.5 Expectation Operator 343
B.6 Properties of Expectation 344
B.7 Mean and Variance 345
B.8 Covariance and Correlation 346
B.9 Continuous Random Variables 349
B.10 Normal Distribution 354
B.11 Quantiles 359
B.12 Relationships among Standard Statistical Distributions 360
B.13 Notes 361
B.14 Exercises 361
